

In 2060 there will be 150 million citizens older than 65 years in Europe. This development provides great opportunities for European business. Suppliers and research communities are invited to a high level conference on innovative public procurement. The conference will focus on how societal changes in Europe demand new solutions and will provide a meeting place for potential European suppliers to meet with contracting authorities from Sweden and Norway.

when solutions meet needs

- Sustainable high tech buildings for senior citizens

at Clarion Hotel Arlanda Airport, Stockholm,
14 March 2013, 10 - 18 hrs

co-founded by:

Sustainable high tech buildings for senior citizens

The municipalities of Lyngdal (Norway) and Falun (Sweden) intend to build sustainable high-tech housing for elderly people.

The municipalities aim to build high-tech buildings that are environmentally friendly, have low life cycle cost (LCC), prevent strain of staff and facilitate improved living standards for seniors with complex needs. The construction will start in the autumn of 2014.

The Conference will present the particular needs of the municipalities. It will focus on the demographic changes in Europe and the challenges of elderly care in the future.

**This conference is part of the EU project InnoBuild.
More information about the conference and the project is available at <http://www.innobuild.eu>.
Please register your attendance on this web-page.**

The program, including speakers and presentations, will be available at www.innobuild.eu by the end of January 2013.
